Replacement period

Approx. 6 months after pasted. When dirt and stain become conspicuous, it needs to be replaced.

Substrate

Stainless steel, wood, acrylic, pvc, glass, etc.

*The effect may be depending on the operating environment.

Precautions

- Please wipe off any dust and dirt on the wall surface with a dry cloth before using.
- Depending on the unevenness, material, and condition of the wall, the product may be difficult to stick or may damage the wall when it is removed.
- Please try it in an inconspicuous place first, and be careful if the wall material comes off.
- It is a delicate product to be used in places where the surface is highly uneven, where the temperature difference is high, and where the humidity is high.
- Please grasp the edges with your fingers or fingernails and remove slowly. (Peeling it off with any force may damage the substrate.)
- The adhesive strength will decrease due to repeated use.
- The color may change slightly under high temperature (60°C or more) and high humidity (85% or more) conditions.
- Please crimp it well under the temperature of 10°C or more as much as possible.
- Do not pour water on this product. (Strong alkaline components may be deposited.)

Disclaimer

- The values and expressions used in this document are based on the results of our measurements and are not a guarantee of performance.
- We do not guarantee that the product will be defective without the use of a substrate that has been confirmed to be compatible with the product in advance.
